DIN 95 - Slotted Raised Countersunk Wood Screws

Technical specification and dimensional reference - A2 (304) stainless steel

DIN 95 Slotted raised countersunk (oval head) wood screws, sizes No.4 to No.12 (3mm to 5.5mm).

DIMENSIONAL DIAGRAM

Length (L):
From the point to the top of the countersink (the rim).
The dome on top is NOT included in the length.

Head angle: 90°
Use a standard 90° countersink bit. The cone sits in the hole and only the dome stands above the surface.

METRIC SCREWS, NOT IMPERIAL
Example: No.8 = 4mm thread
The gauge is a trade name. An imperial No.8 measures about 4.2mm. These are metric.

MEASURE THE THREAD, NOT THE SHANK
The plain shank under the head can be thinner than the thread (for example, No.8: down to 3.52mm). Measure across the thread with a caliper.
